

CITF Report November 2022

Solar Bench

The solar bench is finally installed. When the Baileys checked it out, though, the wifi was not yet functional. Mike has written to ENGO for instructions on the technological aspects of the bench.

Pollinator Habitat

Under the leadership of Andrew Clovis, the shrub border has been extended with more natives at the base of the slope, including two buttonbush propagated from locally-collected seed. On the advice of our soil expert Dylan Holdren, the team also planted a lilac near the Fort Street mowing strip to filter runoff.

On November 10, a volunteer group organized by Mark Krivchenia collected seed at the habitat to be shared with the Broughton Preserve.
